User Story:

Scenario: Schedule-for-me is a compact website made for students. The goal of this website is to provide students with a platform that has most of the tools they need in their daily online school life. Some of the major features of the website are adding/dropping classes, adding notes, chat rooms and chatbot for assistance. To access these features, the user must provide a valid student id and password under their login information. The user gets 5 attempts initially, if the entered information is correct the user is directed to the ScheduleForMe homepage where students get to interact with their schedule. If the entered credentials are incorrect, the number of attempts left is going to be decremented by 1 and the user will be redirected to the login page.
